Digital Learning Festival

Website Design & Responsive HTML/CSS Implementation

Design presentation • FIP Web Design Project

LEARNING
IN MOTION

01 — Problem

Understanding the design challenge

THE CHALLENGE

The annual digital learning festival needed a modern, responsive website that could attract students and educators while making key information easy to find.

Core information the site needed to communicate:

- Event schedule and programme details
- Speaker information
- Registration and participation
- Festival identity and atmosphere

02 — Design Insights

Key considerations that guided the interface

01 Make the first impression immediate

The hero section should quickly communicate the festival and give visitors a clear next action.

02 Prioritize discoverability

Schedules, speakers and programme information should be easy to scan rather than buried in long blocks of text.

03 Use hierarchy to reduce friction

Large headings, concise copy, cards and clear spacing help users move through the page naturally.

04 Design for a digital audience

A dark interface with electric blue accents creates a contemporary digital feel while keeping important actions visible.

03 — Layout Decisions

Why the interface is structured this way

- **Hero + primary CTA**

A strong opening statement and two clear actions immediately introduce the festival and encourage registration/exploration.

- **Stats strip**

Key numbers are presented in a compact horizontal section to establish scale and credibility without interrupting the flow.

- **Card-based content**

Workshops, speakers and schedules use cards so information can be scanned quickly and consistently.

- **Section hierarchy**

Large headings, generous spacing and alternating content blocks create a clear visual rhythm from introduction to registration.

04 — Visual Direction

Colour, typography and overall atmosphere

Dark navy

Digital / immersive background

Electric blue

Accent / calls to action

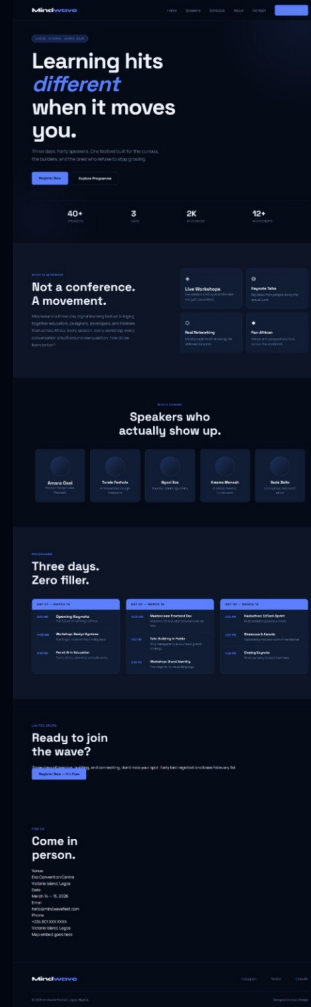

Cool off-white

Readable primary text

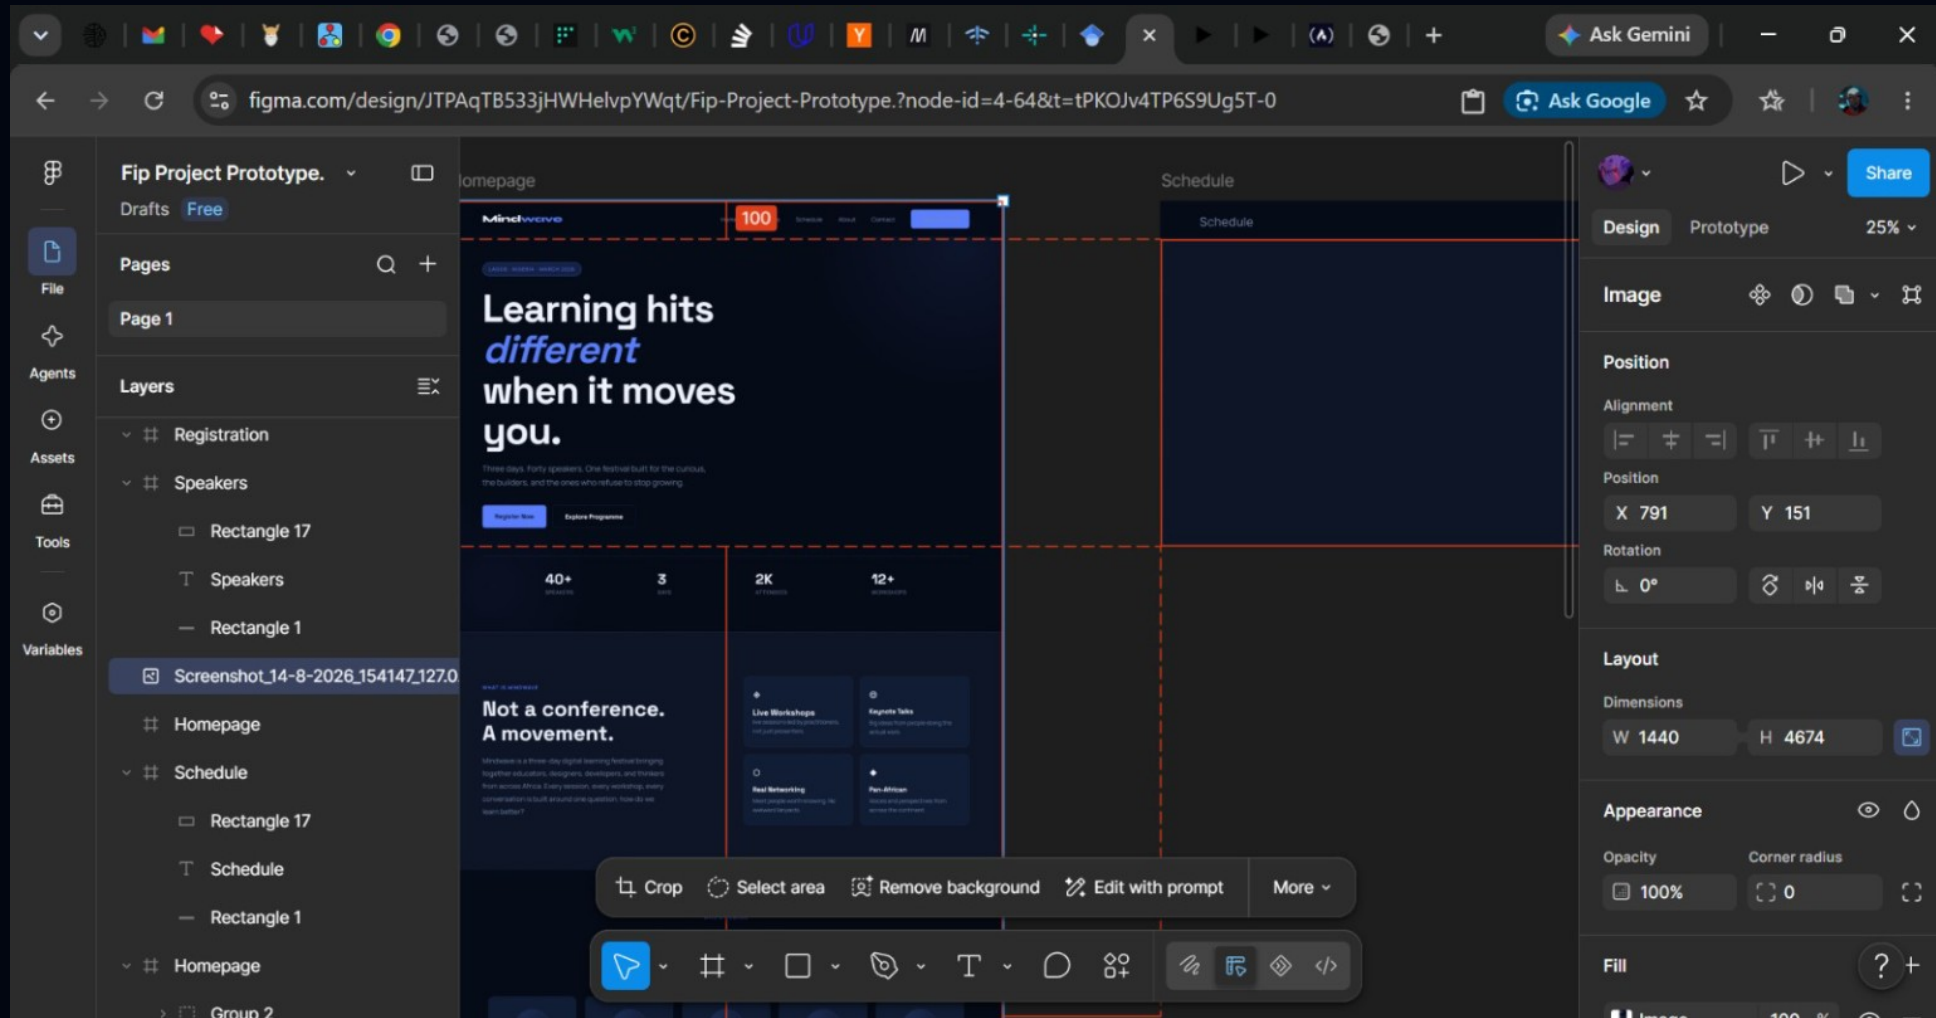

Design rationale

The dark background creates a modern digital-space atmosphere. Electric blue provides contrast and draws attention to interactive elements, while a cool off-white keeps longer text comfortable to read.

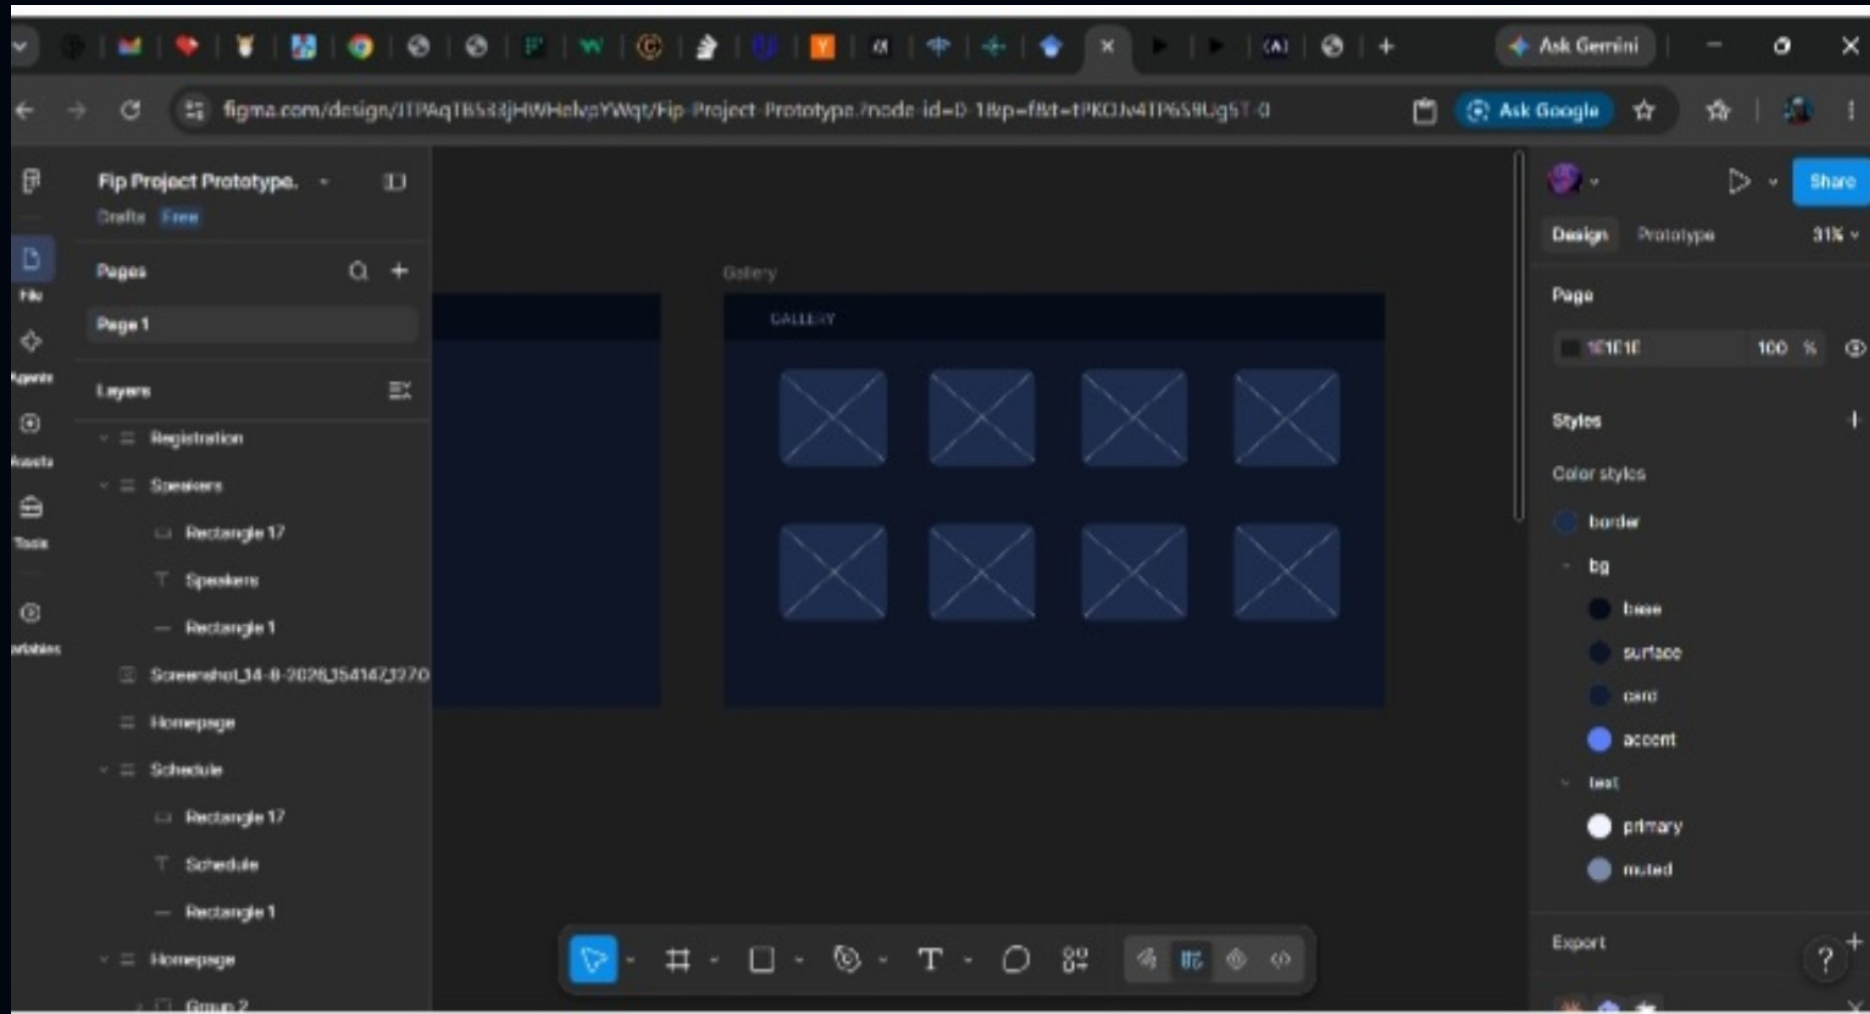

05 — Mockup Board 01

06 — Mockup Board 02

07 — Mockup Board 03

08 — Final Design Direction

A concise, responsive festival experience

**Learning hits
different
when it moves you.**

The final direction combines clear information architecture, strong visual hierarchy and a contemporary digital aesthetic to help students and educators discover the festival, explore its programme and register with minimal friction.

RESPONSIVE WEB DESIGN
